DETAILED ACTION

Page 2

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20 and 32-37, drawn to a lighting device, classified in class 313, subclass 493.
- II. Claims 21-27, drawn to a method for making a lighting device, classified in class 445, subclass 27.
- III. Claim 28, drawn to an electrode housing assembly for a lighting device, classified in class 362, subclass 581.
- IV. Claims 29-31, drawn to a connector for use in a lighting device, classified in class 362, subclass 548.
- V. Claims 38-42, drawn to a method for deposition a coating on a wall of a lighting device, classified in class 427, subclass 66.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the lighting device can be made by providing a wall made by a stamping or printing process, instead of molding, to define a sealed envelope; injecting a gas within the envelope; and attaching a driving source with the gas.

Application/Control Number: 10/820,163

Art Unit: 2879

3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the lighting device does not require, as claimed for patentability, an electrode housing having an interior cavity within its wall, an electrode shell disposed within the cavity, or a contact member in electrical contact with the electrode shell. The subcombination has separate utility such as housing electrodes of an electron gun.

Page 3

- 4. Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the lighting device does not require, as claimed for patentability, a connector body having a wall forming an interior cavity, a slide assembly, a locking jaw assembly, a cap, or a fastener for connecting the connector body to the electrode housing. The subcombination has separate utility such as connecting a power source to an electron gun.
- 5. Inventions I and V are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the

Application/Control Number: 10/820,163 Page 4

Art Unit: 2879

process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the coating can be deposited on a wall of the lighting device by evacuating the envelope; desorbing unwanted gases from the wall; and depositing a silicon-bearing material on the wall using a sputtering process, instead of applying electromagnetic energy across the envelope.

- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 7. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, Group III, Group IV, or Group V, restriction for examination purposes as indicated is proper.
- 8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 9. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2879

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Quarterman whose telephone number is (571) 272-2461. The examiner can normally be reached on M-TH (7-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
